DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1, 2, and 6, drawn to a primer or a set of primers.

Group II, claim(s) 3-5, drawn to a probe or a set of probes.

Group III, claim(s) 7-25 and 30-36, drawn to a set of primer and a set of probes and their method of use.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Inventions covered by I and II do not share a special technical feature in that the products have different physical structures (i.e., different sequences).

MPEP 803.04 states that, “[p]olynucleotide molecules defined by their nucleic acid sequences... that encode different proteins are structurally distinct chemical compounds.” (MPEP 803.04).

Thus, clearly the probes and primers of Groups I and II which encode different proteins do not share a special technical feature. In addition, the method of Group III requires both the primer and probes of Groups I and II, respectively. Therefore, the special technical feature of Group III is not shared by sole primers of Group I nor the sole probes of Group II.

Further Election of a specific combination required for each Group

In addition, each Group detailed above reads on distinct Groups drawn to multiple combination of sequences. Each combination of sequences are distinct because they are groups of unrelated sequences, and a further lack of unity is applied to each Group. The Applicants must **further elect one combination sequence** for examination in the elected Group detailed above.

Payment of fees for an additional invention will entitle the Applicants to examination of one additional sequence.

For example, for Group I, Applicants must elect a single combination of nucleic acid sequences from Table 1. For Group II, Applicants must elect a single combination of probes from Table 2 and a single combination of polymorphisms shown in claim 7 drawn to the elected combination of probes. For Group III, Applicants must elect a single combination of primers from Table 1 or Table 1A, and a combination of probes from Table 2 as well as a single combination of polymorphisms drawn thereto (recited in claim 25).

Applicants are also advised to amend the claims so as to reflect the elected invention as this is a further restriction practice, not an election of species.

A telephone call was not made to request an oral election to the above restriction requirement due to the complex nature of the requirement (MPEP § 812.01).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and

Art Unit: 1637

specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
